

Spore Syringe Manual

Product: Spore Syringe

Description: A syringe containing 20 ml of spore suspension in demi water, suitable for direct inoculation into substrates.

Audience: Intermediate-level customers with prior growing experience.

Components Included:

- 20 ml spore syringe (spore suspension in demi water)
- 1x sterile needle
- Alcohol swabs

Step 1: Preparations

Inspection:

- Inspect the spore syringe to ensure the liquid is clear and free of contamination.

Syringe preparation and disinfection:

- Remove the protective cap from the syringe and disinfect the syringe tip with the alcohol swab
- Carefully remove the sterile needle from its packaging and securely attach it to the syringe and disinfect it.
- Thoroughly disinfect the injection port of your chosen substrate.

Step 2: Inject into Substrate

- Gently shake the syringe to evenly distribute spores.
- Inject the full content of the syringe through the injection port of your grow kit.
- Make sure to tilt the grow **box** sideways and up and down, or gently massage the grow **bag** to evenly distribute the spore liquid throughout the grow kit.
