

Thermometer Strip Manual

Product: Thermometer Strip

Description: An adhesive thermometer strip to measure the temperature of your grow kit.

Instructions

If you're growing mushrooms from a **Grow Box Container**, follow these steps:

- Attach the thermometer strip after you have completed the hydration step and before placing the kit in the grow bag.
 - Remove the film and attach the thermometer strip to your grow kit.
 - Attach it on the side of the kit. Make sure not to place it too far down to prevent it from being submerged in the water as this can loosen the adhesive.
-

If you're growing mushrooms in a **Grow Bag**, follow these steps:

- Attach the thermometer strip during the activation step.
 - Remove the film and attach the thermometer strip to your grow kit.
 - Attach it on the grow bag at the same level as the substrate. Somewhere in between the middle to the lower part of the bag.
-

The thermometer strip will instantaneously show you the temperature of your grow kit within a temperature range of 18-34°C. It cannot show degrees below 18°C and over 34°C.

- If it shows a temperature of 18°C, make sure to place your kit in a **warmer environment** or **increase the heat** on your heat mat
- If it shows a temperature of 34°C, make sure to place your kit in a **colder environment** or **decrease the heat** on your heat mat, or turn it off completely.

For best results, make sure to keep your grow kit within the temperature range of 23-27°C.
