

Water Mist Bottle Manual

Product: Water Mist Bottle

Description: An easy to use water mist bottle to give your mushrooms a humid environment. Use this when growing mushrooms from a grow box container.

Instructions

Step 1: Preparation

- If it's your first time using it or if you have not used the bottle in a while, make sure to thoroughly clean the bottle to kill off any possible bacteria in it.
- Fill up your bottle with clean drinking water.

Step 2: During the Activation Phase

- After you have poured water into the grow bag and placed your grow kit in there, use this mist bottle to gently mist water within the grow kit. Make sure the inner sides of the grow bag gets filled with water droplets.

Step 3: During the Fruiting Phase

Whilst you're waiting for the mushrooms to grow, the grow kit needs to be in a very humid environment.

- Whenever you see little to no condensation within the grow bag, open it up and mist the insides of the grow bag until it's full with water droplets.
- Re-seal the bag puffed up with air.
- Repeat this process whenever necessary.

Tips & Tricks:

- For added sterility, boil the water first before filling the mist bottle.
- Mushrooms grow best when the humidity is around 80-90%. Make sure the grow bag is always filled with condensation.
- When you start seeing mushroom pins, don't spray anymore water as this can make the mushrooms soggy.
