

Mondotub Manual

Product: Mondotub

Description: A specially designed monotub to create the most optimal growing conditions — highly functional and stylish for home use.

Audience: Beginner-level customers with no growing experience.

Components Included:

- Mondo Growbox with ventilation holes
- Sheet of 0.02 µm filters to cover the holes (24p)

Step 1: Preparation

- Disinfect the inside of the growbox thoroughly.
- Let it air dry before use.
- Cover all 12 pre-drilled holes using the provided filter patches.

Step 2: Setup

- Choose a place for your Mondotub setup. Preferably somewhere stable e.g. on a sturdy shelf or the kitchen table.
- Make sure there is enough daylight but avoid direct sunlight or drafty areas.

Step 3: Assembly

Follow these instructions after you have completed the activation step of the grow kit and are about to start the fruiting process:

- Fill the bottom of the monotub with clean drinking water.
- Put your activated growkit in the water.
- Mist the inside walls of the upper part of the monotub.
- Close the monotub

Step 4: Fruiting & Harvest

- **Do not open the box:** the design allows for **passive fresh air exchange** through the filtered holes.
- Within 10–14 days, the first pins should start to appear.
- Open up the box when the mushrooms are ready to harvest.

Step 5: Cleaning & Reuse

- After harvest, clean the monotub manually with warm water and mild detergent — **do not use a dishwasher.**
- If the filters are still clean and not filled with spores, they can be reused up to **3 times** before needing to be replaced.

Tips & Tricks

- Use sterile tweezers or sterile gloves when applying the filters to prevent contamination.
- Avoid moving or shaking the box once fruiting begins.
- For best results, use the Mondotub together with our [heat mats](#) and [grow lights](#).
